^{**}For feeding instructions for this category and weight of horse, please contact our nutritionist at 800-683-1881, ext. 131 or Nutritionist@SeminoleFeed.com.

- Feed a good quality forage at the rate of 1.5 - 2.0% of the horse's body weight per day.

Do not feed on a free choice basis. Feed at regular times, with two or more equal feedings per day. Make all feed changes gradually, over a 7 - 10 day period. Increases in feeding rate should not exceed 1 pound per day for an individual horse. Delay feeding a horse that has just been exercised or is exhibiting pain, fever or diarrhea. Seminole Feed Osceola 10 weighs approximately 1.4 pounds per dry US quart. Feed hay and/or equivalent pasture at the rate of 1.5 to 2 pounds per 100 pounds of body weight daily. Provide a free-choice horse mineral such as Seminole Grass Balancer 16:8 Mineral on a continuous basis. Provide clean, fresh water at all times.

Notice: This product is perishable and must be stored in a cool, dry, well-ventilated area protected from animals and insects. Do not feed moldy, infested or contaminated feed to animals as it may cause illness or death. This feed is for consumption by horses only. No liability will be accepted for direct, incidental or consequential damages resulting from any use inconsistent with the feeding directions, including but not limited to use for other species. Always feed by weight and not by volume. When feeding by volume, periodically weigh the feed to verify that your horse is receiving the proper amount.

⁻ For horses who need additional calories for performance, weight gain or coat conditioning, supplement with Seminole Ultra Bloom* or Seminole Rice Bran Oil.

⁻ If you cannot feed the minimum recommended feeding rate, please contact our nutritionist.

⁻ These feeding guidelines are suggestions based on horse weight and activity level, but adjustments may need to be made to achieve desired body condition.
